Project Description:

As per the project statement I have used 6 conditions.

In 1st condition I have created a file , the file name can be user defined for that I have used Scanner class to take input from user.

In 2nd condition I have provided option for update the file in which user need to mention the file name and the content to be updated by using Scanner class through Command prompt.

In 3rd condition user can delete random file with rile name and location

Using 4th condition we can open any file by providing the file name as input to scanner class.

Now in 5th condition user can search any file generate by user by entering the correct file name.

And last using 6th condition user can exit the application.
